SUMMARY

AI Engineer with hands-on experience in building and deploying ML solutions using Google Vertex AI and scalable cloud data platforms. Skilled in developing secure ML pipelines, implementing AI-driven systems, and enabling enterprise AI adoption through platform validation and data-driven insights.

TECHNICAL SKILLS

Languages: Python, SQL, NoSQL

Backend & Frameworks: Node.js, Django, FastAPI, Unity, API gateways, Microservices Architecture.

Databases & Systems: Data Pipelines, Distributed Database Systems, CI/CD pipelines, BigQuery.

Cloud & AI: Google Cloud Platform (GCP), Vertex AI, Machine Learning models, Large Language Models (LLMs), Generative AI, Agentic AI, MLOps, Agent Evaluation metrics, Prompt Engineering.

DevOps & Tools: Git, GitHub, Docker, Postman, Azure DevOps, Microsoft Fabric

EXPERIENCE

Accenture — Bangalore, India

Oct 2024 – Present

Associate Data and AI Engineer

- Developed Agentic AI solutions that automated complex business processes, reducing execution time from weeks to hours through natural language interactions.
- Migrated CI/CD authentication from Hashi Corp Vault to Workload Identity Federation (WIF), enhancing security and eliminating static credentials.
- Developed a machine learning-powered monitoring solutions optimizing the operations and cost upto 50 percent and automate workload for other teams upto 30-40 percent of efforts
- Built an AI agent and Google Cloud Run service that automated 80 percent of secure access workflows for AD Group-managed data assets (BigQuery tables, datasets, buckets, and authorized views), eliminating manual access requests while ensuring authorization and governance compliance.
- Automated Access requests and TTL extend to data storage like big query with agent and maintaining the authorization and governance of the workflow , eliminated 80-100 hours of weekly manual efforts of application teams
- Collaborated with Microsoft teams to certify Microsoft Fabric for enterprise ML use cases through rigorous platform testing and validation and help in recommending tools to be used for ml usecases.

PROJECTS

Code Monitoring and Code Optimization | *Isolation Forest , Agentic solutions, Azure foundry, Power BI ,Prompt*

- Developed an Isolation Forest-based machine learning model to detect anomalies in storage account read transactions involving millions of requests. Integrated real-time anomaly reporting through Power BI dashboards and automated email notifications via Microsoft Entra ID, enabling proactive monitoring of abnormal cost spikes.
- Built an AI-powered optimization agent that analyzed detected anomalies and recommended efficient storage read strategies to reduce unnecessary transactions. The solution automated 60–70 percent of optimization efforts, reduced storage read costs by up to 50 percent, and shortened the optimization cycle from weeks to hours.

Augmented Reality Based Navigation Interface System | *Unity , AR Core, AI Foundation and A* Algorithm*

- An AR-based navigation system offering immersive, real-time indoor guidance using computer vision, sensors, and metadata for accurate positioning.

Translate and Transcribe | *Nodejs , API Development and JavaScript*

- With help of API's , This Application helps to record and transcribe the voice and translate it to different international languages.

EDUCATION

Savitribai Phule Pune University

2020 – 2024

B.Tech – Computer Science and Engineering — CGPA: 8.8

XII (HSC)

2018 – 2020

Computer Science, Amaravati — Percentage: 93.38

CERTIFICATIONS & PUBLICATION

- Generative AI Leader Certification
- Associate Cloud Engineer Certificate
- MERN Stack Bootcamp 2023 – MongoDB, Express, React and NodeJS
- AWS Partner: Generative AI Essentials
- Claude In Action - Anthropic
- Publication - Augmented Reality Based Navigation Interface System Published in
International Research Journal of Modernization in Engineering Technology and Science (2024)
